

Lab 1.1 — Hello World and User Input in Python

Objectives

By completing this lab, you will:

- Write and run a Python program
 - Verify your development environment is working
 - Use basic input and output
 - Store values in variables
 - Modify and expand a simple program
 - Apply your skills in a challenge exercise
-

Part 1 — Your First Python Program

Instructions

1. Create a new Python file named:
`hello_world.py`
 2. Enter the following code:

```
print("Hello, World!")  
print("Welcome to Python programming.")
```
 3. Run the program in your environment.
-

What to Submit

Source Code

Copy and paste your code.

Program Output

Copy and paste the output from your terminal or IDE.

Expected Output (Example)

```
Hello, World!  
Welcome to Python programming.
```

Part 2 — Adding Input

Instructions

Modify your program to:

- Ask the user for their name
 - Display a personalized message
-

Example Code Structure

```
name = input("Enter your name: ")  
print("Hello,", name)  
print("Welcome to the Python course!")
```

What to Submit

Updated Source Code

Program Output

Example Output

```
Enter your name: Eric  
Hello, Eric  
Welcome to the Python course!
```

Part 3 — Expanding the Program

Instructions

Enhance your program further by:

- Asking for:
 - Your name
 - Your favorite hobby or goal
- Printing a message that includes both

Example Code Structure

```
name = input("Enter your name: ")
hobby = input("What is your favorite hobby or goal? ")

print("Hello,", name)
print("It's great that you enjoy", hobby)
print("Keep learning and improving your skills!")
```

What to Submit

Final Source Code

Program Output

Example Output

```
Enter your name: Eric
What is your favorite hobby or goal? Learning Python
```

```
Hello, Eric
It's great that you enjoy Learning Python
Keep learning and improving your skills!
```

Part 4 — Challenge Lab (REQUIRED)

Objective

Apply what you've learned to build a program independently.

Challenge Instructions

Create a Python program that:

- Asks the user for:
 - Their name
 - Their age
 - Their career goal (or what they want to learn)
 - Displays a personalized summary message that includes all three pieces of information
-

Requirements

- Use at least **3 variables**
 - Use the `input()` function
 - Use multiple `print()` statements
 - Your output should be clear and easy to read
-

Example Output (for reference only)

(Do not copy — create your own version)

```
Enter your name: Sarah
Enter your age: 28
What is your career goal? Cloud Engineer
```

```
Hello Sarah!
At 28 years old, you're working toward becoming a Cloud Engineer.
Keep going — you're on the right path!
```

What to Submit

Source Code

Program Output

Key Concepts Covered

- `print()` function
 - `input()` function
 - Variables
 - Running Python programs
-

Final Submission Checklist

Make sure your submission includes:

- ☐ Part 1 code + output
 - ☐ Part 2 code + output
 - ☐ Part 3 code + output
 - ☐ Part 4 code + output
-

Instructor Note

“By completing Part 4, you’ve moved beyond following instructions — you’re now writing your own programs. That’s the moment you start thinking like a developer.”
